

Canada Tech Career Wage Report 2022 Data from Job Bank

Reporter: Preesa Saewong

According to the data from the national job board website of Canada Job Bank, the best tech job in Canada that pays you the most per hour is Software engineers and designers, at CAD69.33/hr, while Information systems testing technicians pays you the least, at CAD16.04/hr. This result does not include managerial roles in the industry as managerial positions in most occupations usually get paid more than their juniors. Software engineers and designers job category comes with the national occupation classification (NOC) code of NOC2173 and Information systems testing technicians of NOC2283.

If you've just graduated from a computer science or information technology program and are uncertain about what type of work you want to do, why don't start with NOC2173 Software engineers and designers? It's the highest paid entry-level tech job, currently paying at CAD28.85/hr. You might want to avoid the lowest paid role NOC2283 Information systems testing technicians though. But if you're an experienced professional currently working in the field, especially if your job falls into NOC2175 Web designers and developers, you may consider changing to NOC2173 Software engineers and designers. It's currently the highest paid role for experienced tech workers.
